

The Journey

JourneyOne has a long history within the mining industry, with many of the team being recognised as mining subject matter specialists. JourneyOne has a long-standing relationship with Australia's biggest mining company, who has engaged JourneyOne teams on an ongoing basis since the company's inception.

JourneyOne has delivered solutions requiring the provision of services spanning enterprise architecture, strategy and planning, software development, advanced analytics, and project delivery. The JourneyOne people possess expertise in global exploration; end-to-end supply chain optimisation; production and inventory accounting; spatial and geographic information systems; platform strategy and business process re-engineering; and organisational redesign.

How the JourneyOne Team Can Help:

- Align business and IT strategy.
- Optimise value chains.
- Develop advanced analytics capabilities.
- Integrate new technology.
- Select, design and implement IT and vendor solutions.
- Provide enterprise architecture and planning services.
- Re-design business processes and improve and productivity.
- Provide solution architecture and design services.
- Manage organisational change.
- Deliver programs and projects.
- Adopt innovation, including agile coaching.
- Develop agile software.

Our Client Journey Outcomes

Production Scheduling, Planning and Optimisation

JourneyOne has worked with client assets in iron ore and coal to achieve significant productivity improvements through refined planning and scheduling across the production supply chains. The JourneyOne team brings:

- Unique, multi-disciplinary team roles including Solutionisers, Evangelists, Pathfinders, Actioners and Finishers.
- Keen architectural mindsets for big-picture solutions.
- Close collaboration through every stage of the supply chain, to identify and analyse potential problems and gaps.
- Adept engagement with best practice communities for alignment with business objectives.
- Expertise in vendor management and communications, to secure the delivery of solutions as required.

Advanced Analytics and Value Chain Optimisation

JourneyOne is applying advanced analytical techniques to model, simulate and optimise clients' iron ore and coal value chains. The team contributed to project outcomes delivering productivity improvements that amount to benefits in the order of tens of millions of dollars per annum. The insights being provided assist the client to ensure their limited capital is invested on the highest value improvement initiatives.

JourneyOne has the experience and capability in establishing and leveraging advanced analytics and value chain optimisation capabilities to help mining organisations answer key questions. Our experience extends from the establishing of BI strategies and foundational data platforms, through to the delivery of advanced simulation solutions and organisational design.

Project Delivery

JourneyOne has a strong track record in ensuring project delivery to meet the client's desired outcomes.

As an example, the teams were responsible for the implementation of a sustainable laboratory information management system across multiple sites. Providing pragmatic and end-to-end management of the project, JourneyOne was responsible for testing and implementation support encompassing the coordination and direction of the entire project team.

Journey Highlight: Supply Chain Optimisation

JourneyOne understands the role and importance of each stage of the mining chain and appreciates the need to take an end-to-end view. The team's expertise enables effective optimisation of processes all the way through - from pit to port - with close collaboration with operational stakeholders each step of the way to ensure they are on the journey.
